

Analytic skills

Customers who send money ,have to be screened. This means, if the system detects a potential sanctions concern, it generates a review. The review needs to be opened, investigated and eventually closed by an operational agent.

Definitions:

Reach speed: the time it takes for an employee to reach a review the first time

Capacity buffer: agents hired on top of the required amount of employees, to make sure there is proper coverage, even with multiple sick leaves.

Agent: a person working on reviews

Operational team: a team, consisting of agents

Region: the country where the operational team is located

Exercise:

There are 2 operational teams:

10 agents in Malaysia

14 agents in Estonia

Expectations:

An agent finishes 50 reviews per day

There are 1000 reviews generated every day

All teams have to have a 20% capacity buffer

Question: The screening team expects 25% more reviews to be generated, starting from 1st of April, 2025. How many agents does the screening team need to hire, to absorb the extra volume in Malaysia and Estonia?

Writing

Following up on the previous exercise - in April, the incoming volume increased 50%, instead of the expected 25%.

Question 1: Come up with three potential actions we can take to mitigate the impact.

Question 2: Select an item from your list, and write a short proposal, to convince your lead that this is an important item you need to deliver

Focus on the following:

What are the positive and negative impacts, and if one outweighs the other.-

How would you measure success? What trends or metrics would you monitor to prove success?
