

Knowledge check

Customers who send money through Wise, have to be screened. This means, if the system detects a potential sanctions concern, it generates a review. The review needs to be opened, investigated and eventually closed by an operational agent.

Respond to the below questions, in maximum 3 sentences:

1. A screening alert is generated because a customer's name "John S. Smith", partially matches an entry on a watchlist, "Jonathan Smith". The customer's date of birth is 1985-05-15 and the watchlist entry is 1965-05-15.
Based on the information provided, would you clear this alert as a true positive, false positive, or would you investigate further?
2. You have two urgent tasks for today. Which task would you prioritize and why?
 - a. Your manager requested a draft that includes a bullet point summary on the project's progress for your manager.
 - b. Debug a non-critical UI issue in a test environment with someone from the engineering team.

Analytic skills

You are conducting a performance review of the current teams, using the attached dataset.

With the help of an AI solution (Gemini, ChatGPT, etc), your task is to analyse the results globally, regionally, on a lead and individual level.

- a. Identify high and low performers
- b. Report on average performance, using the KPI's

AI usage

Answer the following questions in 1-2 sentences!

1. In the previous exercise, what specific tasks did the AI tool perform for you?
2. Estimate how much time the AI saved you, compared to performing the entire task manually!
3. What was the highest-value output the AI generated?
4. What were the limitations or difficulties you encountered when using the AI tool?
5. What manual checks or corrections did you have to perform to ensure the final answer was accurate and to your liking?
6. What specific prompt/command required the most effort or iteration to get the desired result?

Situational

Narrative: A new operational team was onboarded in the UK 4 months ago. They work 9-5, Monday to Friday, so if they have questions, other Europe based locations can support them online. Going forward, we want to allow UK agents to work afternoons and weekends. You need to validate, if the UK team is ready to work independently, without tenured agent support, by sampling and auditing their work.

You are reviewing the following caselog:

- 2025-10-10 12:30:30 UTC - NEW case created
 - Potential match on identity: #123456789 status: UNRESOLVED
 - Payment #98765 status: SUSPENDED
 - Matched against: null list
 - Reason: Name match
 - ID: accepted 2024-08-17 21:40:20
- 2025-10-10 12:33:08 UTC - NEW case transitioned to UNDER REVIEW by sanctions.agent@wise.com
- 2025-10-10 12:59:54 UTC - SUSPENDED Payment #98765 status transitioned to RELEASED by sanctions.agent@wise.com
- 2025-10-10 13:02:02 UTC - UNDER REVIEW case transitioned to SOLVED by sanctions.agent@wise.com
- 2025-10-11 13:19:22 UTC - UNRESOLVED Potential match #123456789 transitioned to FALSE POSITIVE by sanctions.agent@wise.com
 - Note on potential match #123456789: Closing case. The customer's name is a match on the OFAC list, but it's a common name. Transaction cleared. No other action needed.

Question 1: After reviewing the case yourself, you confirm, the agent correctly identified the false positive. However, you spotted some issues. Name one in each category:

- **Compliance:**
- **Operations:**
- **Quality:**
- **System controls:**
- **Analytics:**

Question 2: Which one of the issues are systematic, and which are a reflection of the agent's quality? What actions would you take to mitigate the risks the agent's work poses?

Question 3: Write a short proposal for a tooling or control-based solution that would improve auditability and/or reduce one of the risks you identified. Include the following sections in your proposal:

- **Problem statement:**
- **Background:**
- **What Done looks like:**
- **Goal:**
